

DuPont™

Tyvek- recycling program

DuPont manages a recycling program that collects used Tyvek® – even printed Tyvek® and recycles it into other useful materials that provide sound alternatives to the use of wood, including park benches, playground equipment, etc. To help you recycle all of your used Tyvek®, DuPont put the recycling infrastructure in place.

DuPont™ Tyvek® wristbands are made of high density polyethylene which is 100% recyclable. Tyvek® can also be safely incinerated, and because it yields water and carbon dioxide, it essentially leaves no residue for disposal. And, if recycling or incineration are not options, Tyvek® can be safely landfilled. Because it is chemically inert and contains no binders, Tyvek® will not leach into groundwater.
